

FINteroperability in Health 2011

Monday 23.5.2011, 12:30-17:00 Lahti, Sibelius-talo, room Kuusi

Audience: Finnish decision makers and experts in healthcare IT

Free registration: <http://www.uef.fi/his/fih11> (limited space)

Topics: New medical knowledge, combined with new technologies, changing legislation and organizational models put increasing pressure towards health IT systems development and integration. Local projects and national initiatives increasingly require interoperability between health information systems.

Key questions to be addressed by healthcare development projects include:

- why do we need standards in healthcare?
- how can international standards be utilized to support local requirements of users?
- why is it important to follow and participate in international initiatives?
- how can international specifications and projects be followed and influenced in practice?

Leading experts from international and Finnish organizations will present and discuss their insights on these aspects, focusing on the value of international collaboration and shared efforts to support interoperable healthcare.

Program: (refinements possible)

| | |
|--------------|--|
| 12:00 | Coffee and refreshments |
