

Personnel cooperation in distributed courses

Sanna Räisänen

Tampere University of Technology

Institute of Software Systems

Presentation contents

- activity system of a distributed course
- contradictions in the activity system
- what's next
- questions for discussion

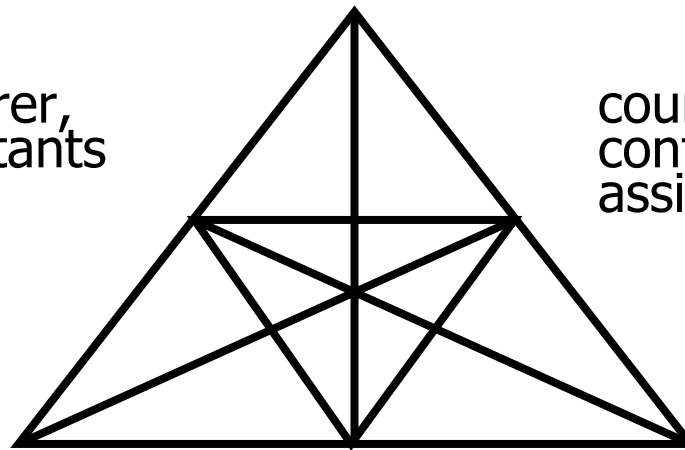

Activity system of a distributed OSCu course

internet, communication applications,
course material bank, teaching knowledge,
project skills

lecturer,
assistants

course
contents,
assistants

course
entity,
topic
knowledge,
teaching
skills

OSCu rules,
course rules

teaching
community

personnel roles,
university roles

Contradictions

- relates usually to actors, allocation of tasks and cooperation
- working in distributed courses requires both autonomy and cooperation

What 's next

- more careful examination of the activity system and contradictions in it
- ways to support the work and cooperation of course personnel
- defining the zone of proximal development

Questions for discussion

- How to examine all the levels in the work of course personnel: individual, group and community?
 - e.g. in this case: the whole project level, a course level, work of a teacher...?
- Ways to use CSCW for supporting cooperation in distributed courses?

Thank you for your attention!
